Delivering Due Diligence

OCA has offered the Due Diligence service to offshore windfarm developers since the company's beginnings. We are pleased to continue to provide this service in 2024, this time for the Jeonnam 1 project in South Korea which has recently reached financial close and is quickly moving into the construction phase.

While performing due diligence, we undertake an independent check and review of various project aspects with a fresh pair eyes, often with the input of several members of our team, and perhaps identify risks that might have been overlooked. It is on these types of assignments that our combined offshore wind experience really shines!

NEWS

Introducing our Project Model

OCA is pleased to introduce a project model, building on our team's experience of offshore wind development and management. The structure of the model outlines all the stages of development for an offshore wind farm and defines "gates" that must be satisfied before proceeding to the next stage. The model contains guidance and templates for the documentation required to complete each gate and covers all stages of project development from screening to execution. OCA's clients can benefit from a complete and ready-to-use framework to ensure risk minimization and successful project development.

If you would like to know more about the project model please contact Helena Estrada to arrange a meeting.

EVENTS

OCA will be attending

13 Mar Newcastle

PORTS
& VESSELS

20-22 Mar Bilbao

22-25 Apr New Orleans

PEOPLE

Welcome to Arn Koning

In November 2023, we welcomed Arn in our Hague office in the Netherlands. As a lead consultant, he brings over 15 years of offshore T&I experience to the team, particularly in Project Management and Project Engineering.

Arn has worked on complex wind farm foundation and platform projects around the world and has experience with structural design, transportation and heavy lifting of major components for offshore wind. After a short break from the offshore wind industry, he is pleased to be back and to get involved in current exciting projects!

LET'S MEET!

So we can discuss how OCA can support your project.
