Strategic Insight, Laying the Groundwork for Project Success

Defining feasibility through early-stage excellence.

At OCA, our experienced consultants work closely with our clients to deliver a comprehensive analysis of development risks, Pre-FEED planning, and strategic market insights across both emerging and mature markets.

Our bespoke, hands-on approach to early-stage project development enables a clear feasibility assessment, the early identification of technical risks across all project packages, the establishment of robust engineering processes, and the uncovering of value creation opportunities.

Experience, Commitment, Complexity

We bring extensive experience in supporting early-stage project development, helping clients confidently navigate the complexities of technical design and consenting. We lead the curation of Project Design Envelopes, implementing strategies that de-risk the consenting pathway while preserving technical flexibility, and develop engineering frameworks that support asset design from Pre-FEED through to detailed design. Our proven track record in the world's most challenging emerging markets builds client trust, reduces risk, and provides the strategic insight needed for project success.

Services

Early Stage Feasibility

We serve as a trusted partner for clients pursuing seabed acquisitions, identifying and evaluating key risks, developing early-stage business case inputs, and providing strategic guidance throughout the acquisition process. Through transparent and consistent communication, we empower clients to make informed investment decisions and confidently advance their projects.

Pre-FEED Development

Our consultants manage and deliver Pre-FEED asset designs that support ongoing project development and help refine the business case. We coordinate closely with client engineering teams to formulate the project design basis and develop a suite of tailored processes that facilitate engineering workflows and ensure efficient interfaces between project teams throughout project delivery.

Design Envelopes

We provide curated, design envelopes and supporting strategies that enable clients to maximize technical flexibility, while strategically balancing and quantifying environmental impacts in collaboration with key stakeholders. OCA's design envelope approach allows clients to take full advantage of the latest technologies on the market and effectively navigate consenting and offtake uncertainties.

Planting the Seeds Early on

Proven track record in early stage project development

Since 2015, OCA has provided early stage development management and related services to several major offshore wind developers in multiple global markets. Notably, this includes a range of feasibility studies for projects in support of their consenting workstreams, as well as development support across International project portfolios. We continue to support early-stage project development today, bringing experience, technical insight, and peace of mind to our clients.
